

## **Aplus Mobile signs Exclusive East Coast Sales Agreement with XenGenn**

*XenGenn has been awarded exclusive sales agent rights of Aplus Mobile's A20-MC and peripherals for the United States east of the Mississippi River.*

For Immediate Release

OREGON CITY, Ore./ /May 9, 2007 --- Aplus Mobile ([www.AplusMobile.com](http://www.AplusMobile.com)) selected XenGenn ([www.XenGenn.com](http://www.XenGenn.com)) to be the exclusive east coast sales agent for their DC-powered, harsh environment personal computers and peripherals. Located on the west coast in Oregon, Aplus Mobile recognized the benefits of representation on the east coast of the USA. XenGenn became the perfect partner for its proximity to government agencies, metropolitan areas and established commercial accounts.

XenGenn will service all Aplus Mobile customers in the United States east of the Mississippi River. Initial customer contact and support will be provided by XenGenn. Aplus Mobile will continue to support all DARPA Urban Challenge customers directly.

XenGenn is a product development firm that provides logistics for integration of high-end commercial and military products. With over 35 years experience, XenGenn has serviced customers in domestic and international markets.

XenGenn recognizes the merits of the A20-MC and is incorporating the harsh environment PC into several of its own product development awards.

The A20-MC computer is powered by 12~29 Volts DC and has an Uninterruptible Power Supply (12V-UPS(TM)) built in. The Power Fault Tolerant(TM) design survives total power interruption and automotive-type transient voltages. It is ideal for a vehicular environment which has very dirty power interrupted by numerous power drop outs and spikes. The 12V-UPS(TM) is a proprietary feature of all Aplus Mobile computing products.

The casing of the A20-MC is made of machined cast-aluminum and is sealed shut. The water resistant computer can even be washed down along with the vehicle or robot.

The A20-MC works like a typical personal computer but is more reliable in harsh environments. It runs popular operating systems such as Windows, Linux or QNX and is configurable to provide options such as a WiFi connection to a main computer system, video capture input or HDTV-OUT connections for big screens which can be used for mass transit or outdoor advertising.

Aplus Mobile, Inc. is a USA-based Original Equipment Manufacturer (OEM) high-technology company that was founded in 2004 to design, develop and manufacture DC powered, harsh environment mobile computers for extreme applications.
